RE: Additional Sampling Near No. 6 Oil Tank UST
Chester Operations Facility

Dear Sir:

As requested in your letter dated September 25, 1990, additional work has begun in the area of the No. 6 oil tank. Enclosed is a letter from Groundwater Technology, Inc. (GTI) listing the additional work we are conducting to address the concerns mentioned in your letter.

GTI plans to drill two additional soil borings; one completed as a monitoring well with associated soil and groundwater sampling and analysis. The soil borings will consist of a 2-inch PVC well to be installed by a hand-operated Minuteman drill rig. Two soil and two groundwater samples will be submitted for analysis by EPA Method 8020 for benzene, toluene, ethylbenzene, and xylene, and by a modified EPA Method 8015 for total petroleum hydrocarbons.

If you have any questions concerning this letter please call me at 215-499-6043.

Sincerely,

DeNorris Williams
